

# Doing your PhD with ChatGPT: How can I learn with artificial intelligence to become a good researcher?

---

Quentin Loisel

Glasgow Caledonian University & Health CASCADE

Erasmus+ Webinar on Artificial Intelligence

16<sup>th</sup> July 2024

# I. What is Generative AI?

 Text generation (e.g., ChatGPT, Bard, etc.)

 Image generation (e.g., DALL.E 2, Midjourney, etc.)

 Audio generation

 Video generation (e.g., Synthesia, etc.)

 Code generation (Copilot, AlphaCode, etc.)

 Data generation & augmentation

 Virtual worlds

“Generative AI has the potential to change the anatomy of work, augmenting the capabilities of individual workers by automating some of their individual activities”

– from *Economic Potential of Generative AI* by McKinsey

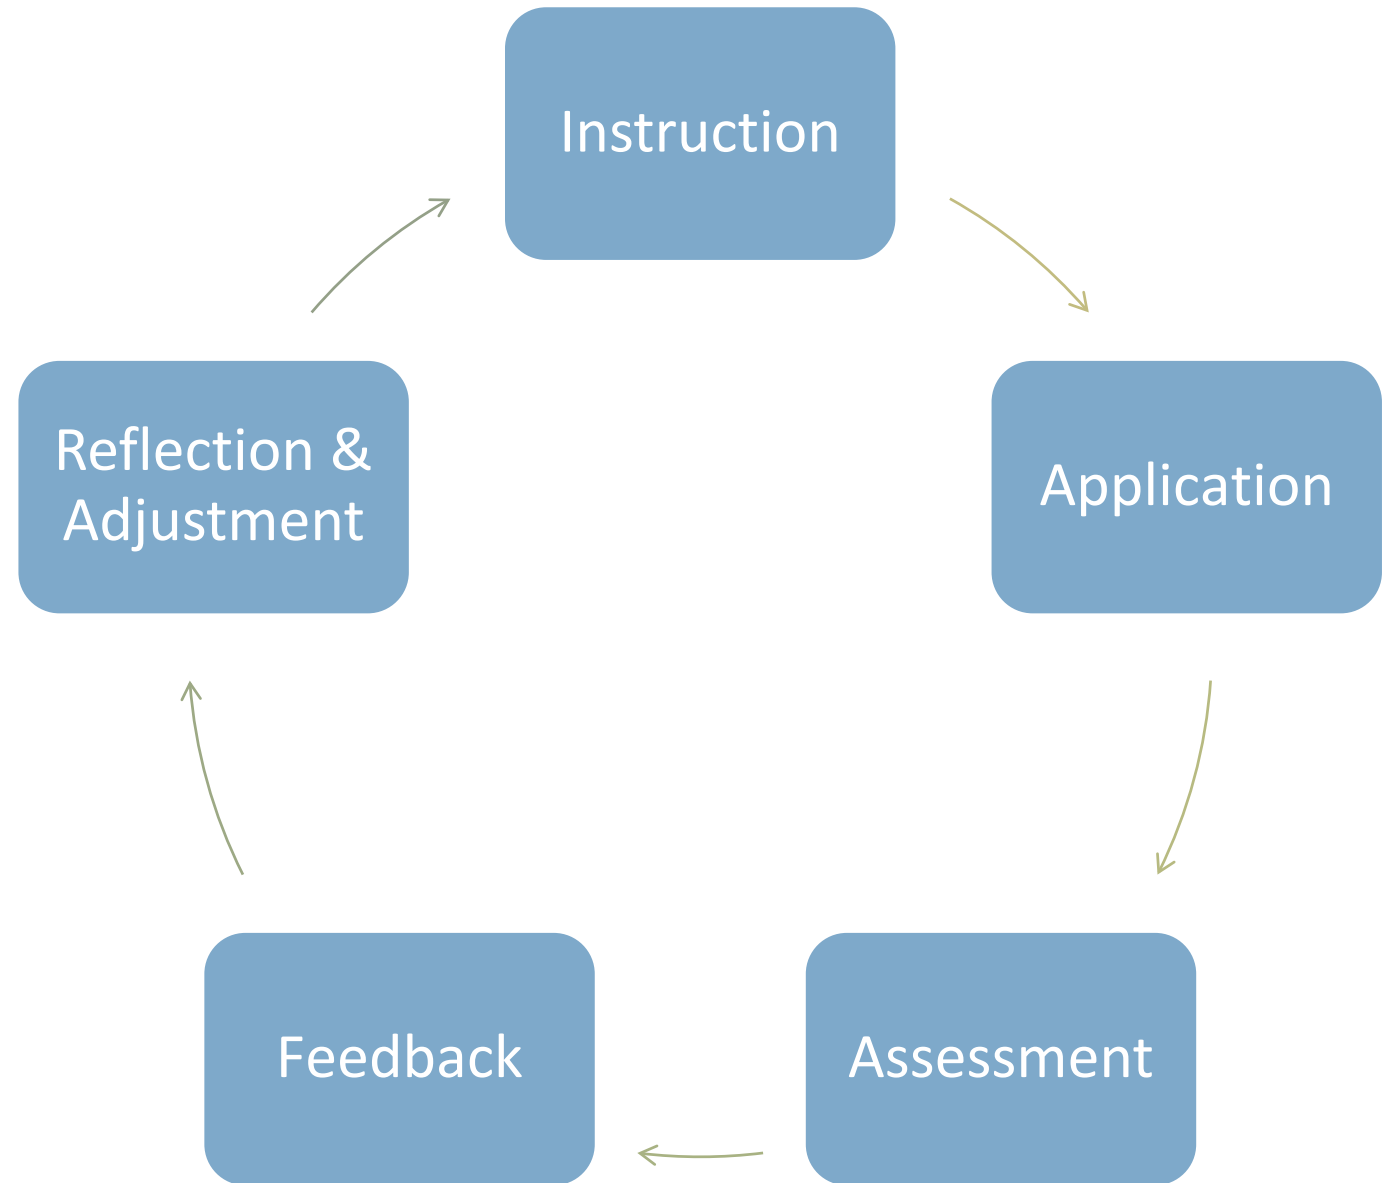

## II. A (simple) learning model

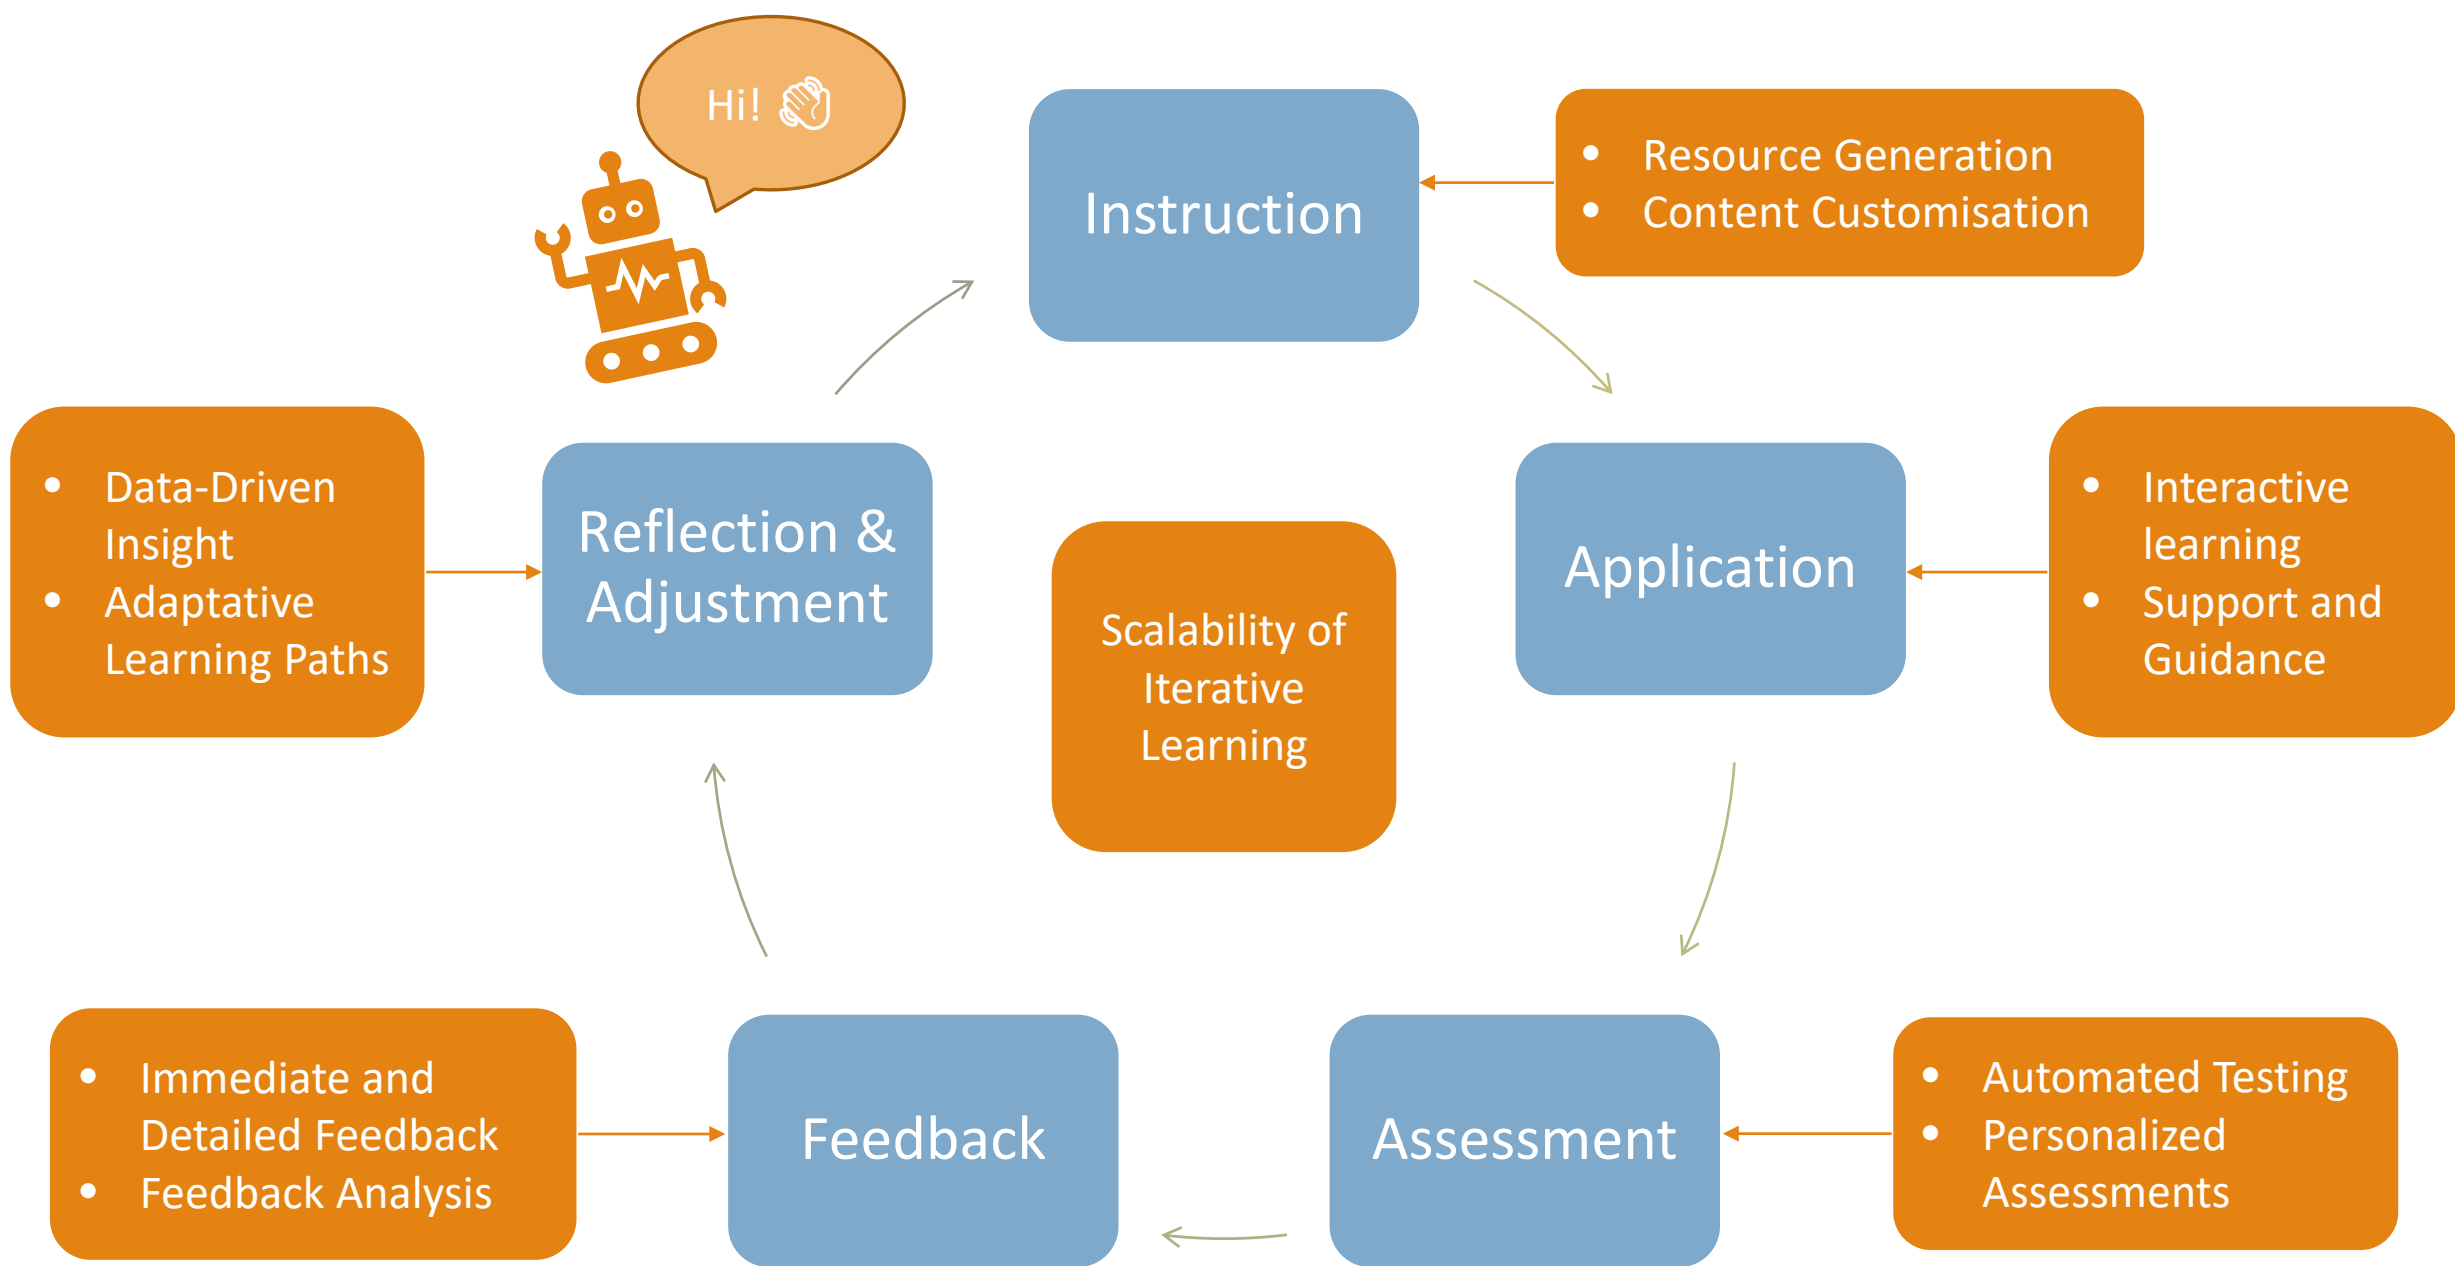

### Professor

- Expert in their field
- Expert in the learning process

### Student

- Becoming an expert in their field
- Need to acquire knowledge and skills

# III. Human-AI Learning Synergy

---

How can I become a good researcher?

Learning process → Knowledge & Skills

# III. Human-AI Learning Synergy

Versatility: Generate, Classify,  
Summarise & Translate  
Vast Information Processing  
Consistency  
Scalability  
Multilingual Capability  
(Un)biased analysis  
24/7 Availability  
Updating knowledge  
Customisation and flexibility

Creativity  
Emotional intelligence  
Ethical judgment  
Adaptability  
Critical thinking  
Intuition  
Context understanding  
Collaborative Skills  
Learning from limited data  
Flexibility in problem-solving

## Automation & Augmentation

# How can I become a good researcher?

Learning process → Knowledge & Skills

## Learning Process

- AI Automation

What activities can I delegate to the AI to advance?

- AI Augmentation

How can the AI help me with the learning process?

- Cooperate with the AI to develop my expertise

## Knowledge & Skills

What **automation & augmentation** from the AI in my future work?

- Learn how to cooperate with the AI in my future work

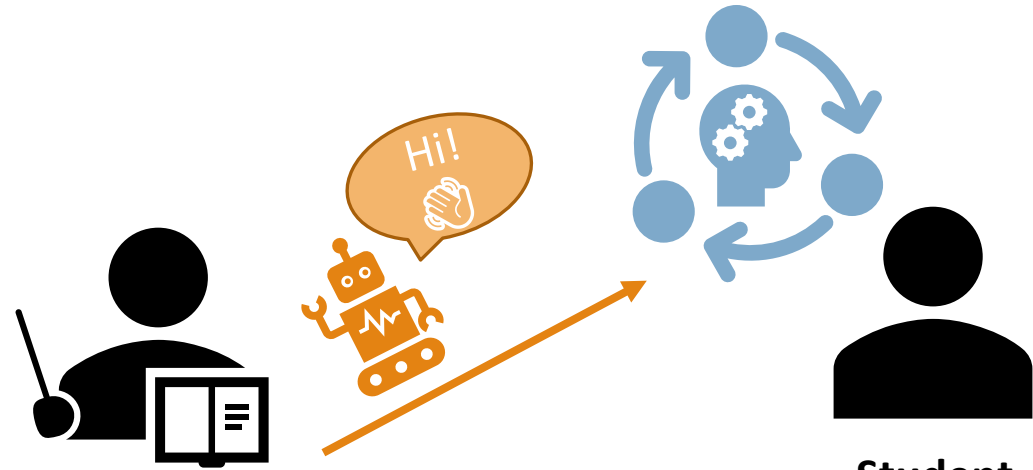

### Risks

- Skills Atrophy
- Risks of Bias and Misinformation
- Over-reliance on Technology
- Intellectual Property and Plagiarism Concerns
- Economic and Professional Displacement
- Accessibility and Equity Concerns
- Environmental impact

## III. Human-AI Learning Synergy

### Professor

- Expert in their field
- Expert in the learning process

### Student

- Becoming an expert in their field
- Need to acquire knowledge and skills

- Ability to identify what is needed
- Adapt the learning
- Evaluate the output quality

- **Professor:** learn how **to cooperate** with the AI
- **Student:** learn to **become an expert & cooperate** with the AI

# Thank you for your attention

## Key takeaways

- Transformative potential of generative AI for learning
- Need to rethink the learning process
- Need to think about how to learn with AI
- ...but also learn how to use AI
- Need to develop the double expertise: in their field & AI Cooperation
